

How to make a glitter jar with corn syrup for kids, step by step:

1. Prepare warm (not hot!) water.

You don't want the water to be boiling when you pour it in the bottles or it will warp the plastic. Believe me, that's happened to me! Just warm water from the faucet works well.

2. Select and add glitter to the bottle.

I put in about a **level half inch of glitter to start**. Put the glitter in first, before anything else.

Don't add too much because it may clump and be stuck at the top after you add everything else. I chose 3-5 types for each bottle, usually two of the fine, and one or two of the larger variety.

3. Add a little bit of water and shake gently

Swirl up the glitter to help prevent clumps!

4. Add glycerin or clear corn syrup until the bottle is 1/4 full (approximately)

I did less and more with each bottle since I made a lot and wanted the “speed” of the glitter to be different. This one you can see the glycerin is about as high as the glitter containers and I really liked the outcome.

5. Add water until the jar is almost full

Leave some space at the top still to add more glycerin if needed and to properly stir it later.

6. Add 2-3 drops of dish soap

Not too many, because you can always add more! It tends to get bubbly if you add a lot, but the soap helps disperse the glitter.

7. Close the jar and turn it a few times to mix everything up

Gently shake to see the consistency of everything.

8. If the glitter is stuck at the top of the bottle - Stick your finger in and give it a good swirl around gently stir and mix it up, wiping your finger on the inside to keep as much glitter in as you want. In a few instances I removed some glitter and foam manually, no big deal.

9. Close the cap again, shake a little more, and check out how slow or fast the glitter settles

10. Top it off and glue it shut

Once you are happy with the combination of glitter and glycerin you can add more warm water or glycerin and close the bottle for good!

Use [gorilla glue](#) or a [hot glue gun](#) to keep it tightly closed.

How to make glitter jar with tempera paints and clear liquid hand soap:

Supplies:

- Water bottle
- Glitter glue
- Clear liquid hand soap
- Glitter tempera paint
- Fine glitter
- 1 quart glass liquid measuring cup or a mixing bowl
- Whisk
- Hot water
- Superglue

Time: 25 minutes

Directions:

Gather materials and tools

1. **Add hot water and glitter glue, tempera pain and fine glitter to a measuring cup or mixing bowl.**

First, add hot water (boiling is best) and a good squeeze (about 1 or 2 tablespoons) of [glitter glue](#) into a [1-quart glass liquid measuring cup](#). Next, add a squirt of [glitter tempera paint](#) and sprinkle in a pinch of [fine glitter](#).

2. **Mix ingredients together and quickly pour into a bottle**

Mix ingredients together with a whisk and quickly pour the Frozen-inspired snowstorm sensory bottle mixture into a recycled bottle. Don't pour it all the way to the top yet. You may find that you need to add a little more glue, glitter, or paint.

3. **Mix in a little clear hand soap**

Add approximately 1/8 cup of clear liquid hand soap to the snowflake sensory bottle mixture.

4. **Consider adding more of the basic ingredients**

Determine if more handsoap, glitter, glitter glue, or glitter [tempera paint](#) needs to be added to the sensory bottle. Pour a little bit of the sensory bottle solution out in order to make room for more of this or that if needed.

5. **Top the sensory bottle off**

Add a little more water, or liquid hand soap to the snowstorm sensory until the glitter mixture is all the way to the top. Next, put the lid on, and give it a good shake.
