

# Dino-Bot

## Challenge

An experiment at the Isla Sorna Robogenics Facility has gone terribly awry. A nightmarish robotic beast is on the loose. Spawned from the secret labs of ISRF, he is free in the city, stomping and crushing with reckless abandon. He is your robot. He is Dino-Bot.

## Rules

1. Robots must move autonomously.
2. Knocking down all the buildings (empty toilet paper rolls or PVC structures) successfully completes the challenge.
3. You may not touch the robot after pressing the start button.
4. You have 1 minute to knock down all the buildings.
5. If more than one robot competes, the robot that knocks down all the buildings fastest wins.
6. Bonus points for Dino-Bots that exhibit a creative touch...physical resemblances to dinosaurs, sounds, etc.

Note: Course layout may also be made on a smaller scale.
