**CANNING**

Pressure process for low-acid foods are the only recommended methods to heat process foods for shelf storage

Times for heat processing preserved foods correctly vary depending on each specific recipe or food type. Processing times must be in agreement with those listed in the approved reference guides.

**PRODUCT APPEARANCE**

Produce should be free from blemishes, stems, pits and peels. Some recipes may state stems, pits and peels are not removed, this is acceptable if the recipe is in keeping with all other preserving guidelines.

Liquid must be clear and free from cloudiness and small particles unless there are ingredients added to the recipe that would naturally affect its clarity.

Color of the finished product should be as close to its natural characteristics as possible or standard for cooked product.

Texture is affected by heat processing; however, the finished product should not appear over-cooked or broke down.

Ingredients should retain their shape and size based on the type and preparation method. Cut pieces, of uniform size, should be packed evenly in the jar, yet allow adequate room for liquid to circulate throughout the jar.

Safety is of utmost importance. Any entry exhibiting spoilage or not in compliance with judging guidelines *must be disqualified.*
