The North Central Region-Sustainable Agriculture Research and Education (NCR-SARE) Farmers Forum is a traveling annual event giving farmers, ranchers, researchers, and others the chance to share information about sustainable agriculture practices with a national audience.

These presentations focus on research, demonstration, and education projects that promote profitable practices that are good for the environment and community. The projects highlighted in these presentations and the Farmers Forum are funded by grants from NCR-SARE, a USDA-funded program that supports and promotes sustainable farming and ranching by offering competitive grants and educational opportunities.
