

Extension - Jefferson County

April 2023 Newsletter

Dear Friends.

Things are speeding up in the Extension Office. This month we had another round of successful 4-H SPARK Clubs with Safe Sitter and Experience Vet Science. The first of three Quality Care of Livestock Trainings had a big turn out last month from members wanting a jump on their summer. The Sheep Nutrition Workshop had 30 people in attendance. We are glad to see so many 4-H members taking advantage of learning experiences in place of filling out their record sheets. ANR wise, we also hosted a tobacco growers meeting and continue our Master Gardener Basic Training with

Kasie Bachmann

Office Manager kbachman@purdue.edu 14 new members as well as holding a Master Gardener Association meeting that was open to the public.

Spring livestock tagging is the big news in the 4-H program area. Reminders and a traffic map are included in this letter. Flyers for 4-H Camp and State 4-H programs are also included. Spots fill up fast so sign up now!

In the HHS program area this month we will hold a ServSafe Food Handler program, and the Homemakers will host their annual Quilt Show. HHS has also been busy visiting schools with Captain Cash programming for 3rd graders!

We are looking forward to another busy summer here in Jefferson County. As always, feel free to reach out to our office with questions or information on upcoming opportunities. The next 4-H Fair Board meeting will be April 6th at 7 pm in the Community Building. The next Extension Board Meeting will be May 10th at 6:30 pm.

Sincerely,

Julit

May 15th 4-H Online Animal ID DEADLINE

Anyone wishing to exhibit animals in the 2023 Jefferson County 4-H Fair must have their animals enrolled by May 15th on 4-H Online. If you have been putting off your enrollment, this is our hard and fast deadline. Any animals not enrolled and properly identified by this date will not be allowed to exhibit at the county or state fair. Rab-

bits, poultry, dogs and cats do not have to be enrolled online.

The good news is the extension office is here to help! At both tagging days staff will be in the extension office 7-10 am to help you enroll. After you go through the tagging line just drive up to the back door and we will help you enroll. You can also call or stop by during normal business hours M-F 8am-4pm, (812) 265-8919.

- Link to 4-H Online: https://v2.4honline.com/#/user/sign-in
- Instructions on how to enroll your animals: https:// • extension.purdue.edu/4-H/ docs/projects/animal-identification/animalid-instructions.pdf

Agriculture & Natural Resources

Master Gardener Meeting Notice

The next Master Gardener Association meeting will be **April 28th at 6 pm in the Community building.** The program will be Composting 101. Members are also encourage to bring in seedlings for a plant swap! Association Meetings are open to the public so if you want to learn more about composting or master gardeners in general you are welcomed to attend. RSVPs to the extension office are appreciated for non members.

Invasive Species Reminders from Indiana DNR

Spotted Lanternfly

Spotted lanternfly is a major pest of concern across most of the United States. This insect is native to China and parts of India, Vietnam, Japan, and Taiwan. It was first identified as an invasive species in 2004 in South Korea and is now a major pest there. Spotted lanternfly was first detected in the United States in Pennsylvania in 2014.

In July 2021, a population of spotted lanternfly (*Lycorma delicatula*) was identified in Indiana in Switzerland County, near the Ohio River. A second population was found in Huntington, Indiana in July 2022. DEPP and USDA continue to conduct surveys to ascertain the extent and source of these infestations as well as determine what management strategies will be implemented.

Suspected finds should be reported to the Indiana Department of Natural Resources. <u>Call 866-NO EXOTIC (866-663-9684) or</u>

<u>email DEPP@dnr.IN.gov.</u> Please leave your name, contact number and detailed information about what you are reporting. Photos are always appreciated. By notifying us of a potential pest problem you provide an invaluable service to the DNR and our natural resources.

Indiana Invasive Species Listing

Invasive species are plants, animals, and diseases that are not native to the area in question and have or are likely to cause environmental, human health, or financial harm in Indiana. Many invasive species have entered Indiana or are a threat to arrive in our state. You can fight back by learning the signs, reporting sightings, and taking precautions. Access the listing of invasive species here: <u>https://www.in.gov/dnr/rules-and-regulations/invasive-</u>

species/. Reporting guidance is also included on this page.

Agriculture & Natural Resources

Freeze/Frost Probability & Growing Season Length

Figuring out what the weather is doing from one day to the next can be challenging, especially in Indiana. When you are making those decisions for your valuable

crops and ornamentals Purdue has several great resources.

The Indiana State Climate Office makes daily updates to climate maps, data sets and planting recommendations. View their data at https://ag.purdue.edu/indiana-state-climate/freeze-frost-probability-growingseason-length/.

Purdue Extension also has publication to help smaller gardeners make those decisions and is an easier read. Access that resource here: https://www.purdue.edu/hla/sites/yardandgarden/extpub/indianavegetable-planting-calendar/

April Garden Calendar

Spring is sprung! Or has it? There might be a few more cold snaps in our future. While you are biding your time to start your gardens and flower beds check out the April Garden Calendar for a list of tasks you can complete around garden from retired Purdue Consumer Horticulture Specialist, Rosie Learner.

Home (Indoor plants and activities)

- Start seeds of warm-season plants (including tomatoes, peppers, eggplant, marigolds, zinnias, and petunias) indoors for transplanting later to the garden.
- Harden off transplants started earlier in spring before • planting outdoors. Gradually expose the young plants to outdoor conditions of wind, brighter sunlight, and lower moisture.
- Apply fertilizer to houseplants according to label direc-. tions as days grow brighter and longer and new growth begins. Foliage plants require relatively high-nitrogen fertilizer, while blooming plants thrive on formulations that are higher in phosphorus.
- Keep Easter lily in a bright, cool location, out of direct . sunlight. Water as soil begins to dry. You can remove the yellow, pollen-bearing anthers inside the flower by pinching to prevent staining the petals.

Yard (Lawns, woody ornamentals and fruits)

- Plant a tree in celebration of Arbor Day, April 28. You should plant bare-root stock before new top growth begins. You can plant balled and burlapped and container- • ized stock later in spring.
- Complete pruning chores. Remove dead and injured • branches first.
- Apply a prebloom, multipurpose orchard spray to fruit trees.
- Remove winter coverings from roses, but keep mulch nearby to protect them from late freezes. Prune and fertilize as needed.
- Apply pre-emergent herbicide to control crabgrass in • • lawns. Approximate application dates are late March to

mid-April in southern Indiana and mid-April to early May in northern Indiana. Exact timing varies each year with weather conditions. For more precise application timing based on Growing Degree Days (GDD), visit Michigan State University's GDD Tracker. Enter your ZIP code and select "Crabgrass Pre." The target GDD window for crabgrass prevention is 250-500.

Garden (Flowers, vegetables and small fruits)

- Plant seeds of cool-season crops directly in the garden as soon as the soil dries enough to be worked. When squeezed, soil should crumble instead of forming a ball. Cool-season crops that can be direct-seeded include peas, lettuce, spinach, carrots, beets, turnips, parsnips and Swiss chard.
- Plant transplants of cool-season crops, such as brocco-• li, cauliflower, cabbage, Brussels sprouts, kohlrabi and onions.
- Plant or transplant asparagus and rhubarb crowns. For • best plant establishment, do not harvest until the third year after planting.
- Plant sections of certified, disease-free potato "seed" • tubers.
- Allow the foliage of spring-flowering bulbs to remain in • place after blooms fade. Leaves manufacture the food reserves, which are then stored in the bulb for a repeat showing next year.
- Plant hardy perennials, such as daylilies and delphiniums.
- Start tuberous begonias and caladiums indoors for transplanting to garden later.
- Remove winter mulch from strawberries, but keep • mulch handy in case late frosts are predicted and to help keep weeds under control.
- Plant or transplant strawberries, raspberries, and other • small fruit.
- Prune grape vines to remove dead or weakened limbs and to thin as needed.

Agriculture & Natural Resources

Managing Garlic Mustard Purdue Landscape Report by John Woodmansee

Garlic mustard (*Alliara petiolata*) can be found in public parks, backyards, meadows, forests, gardens, and along roadsides throughout Indiana. The leaves have a strong garlic smell to them. Garlic mustard was first introduced from Northeastern Europe in the 1860s in Long Island, New York. Immigrants from Europe used it for food (an herb), medicine, and erosion control. It can be spread by water, insects, wind, animals, or humans. Here's the kicker with garlic mustard – according to research (Kleinstein 2001) each year

Here's the kicker with garlic mustard – according to research (Kleinstein, 2001), each year one plant can produce up to 15,000 seeds that are viable for up to 5 years. (Other references mention 3,000 to 8,000 seeds). Regardless of whether it's a few thousand to many

thousand, it's a lot of seeds. So, if you let a few garlic mustard plants go this year, you could have a "train wreck" of weeds in a few very short years, and you could be fighting those weeds for years to come. The research also states that garlic mustard has properties that may inhibit growth and the competitive ability of other plants, empowering the invasive nature of the weed. Large patches of garlic mustard also reduce light availability in spring for species growing on the forest floor.

Garlic mustard prefers shady, moist conditions, such as woodland settings, but can also grow in sunny conditions. It is a biennial, which means that vegetative growth in a "rosette" form close to the ground occurs in the first year.

In the second year, it produces an erect stem with small, white 4-petaled flowers that produce seeds, then it dies. It can grow from several inches up to about 4 feet. Rosette leaves are dark green and heart-shaped, with scalloped edges. Leaves on second-year growth are more triangular, becoming more strongly toothed as the plant matures. Garlic mustard develops slender seed pods that open in the late spring/summer. According to the U.S. Forest Service, "Garlic mustard poses a severe threat to native plants and animals in forest communities. Once introduced to an area. garlic mustard out-competes native plants by aggressively monopolizing light, moisture, nutrients, soil, and space." The plant has no natural enemies.

So, what can be done? Some public parks have enlisted the help of groups like Boy Scouts, Master Naturalists, and others to pull garlic mustard in spring before or near the onset of flowering (before it goes to seed). Although tedious, that is one of the best management strategies and one that homeowners can also do around their property. They are easier to pull after a rain event. Application of herbicides containing glyphosate and triclopyr is most effective on the first year (rosette) form in the fall. Be sure to read and follow all label instructions, and note that glyphosate and triclopyr will affect any plant it touches, so be cautious.

Find out more information about garlic mustard from USDA (with links to other credible sources) at <u>https://</u>www.invasivespeciesinfo.gov/ profile/6655/resources.

Livestock Tagging is this month!

Beef Tagging—April 15, 2023, 7 –10 am on the Fairgrounds

Any youth planning to show a beef steer, heifer, and or dairy steer at the 4-H County Fair this summer must bring their animals to the Fairgrounds for tagging/identification. Dairy Females and previously shown and tagged females with appropriate registration/identification information do not need to come to tagging.

Traffic will enter the main gate and proceed to the Swine Barn as normal. Please be respectful of volunteer leaders time and arrive between 7-10 am.

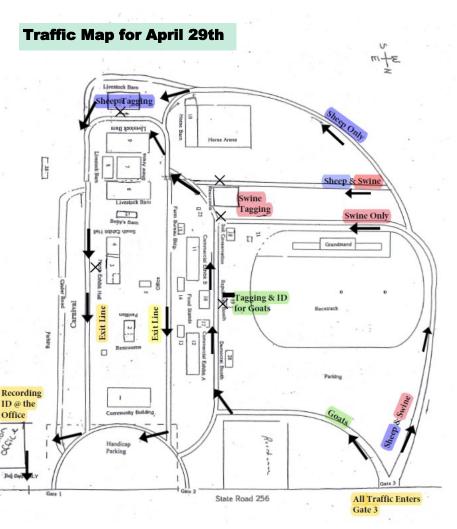

Sheep, Goat, Swine Tagging—April 29, 2023, 7 –10 am on the Fairgrounds

Any youth planning to show sheep, goats, or swine at the 4-H County Fair this summer must bring their animals to the Fairgrounds for tagging/identification. Previously shown females that have the proper ID do not need to come to tagging. *All traffic is to enter gate 3 (grandstands entrance) and follow signage.*

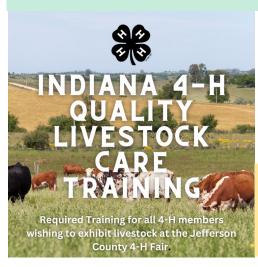

- Animal ID Requirement— <u>If you plan to or are thinking about showing at the state fair</u> let your livestock superintendent know at tagging in order to receive additional tags and have a DNA Hair sample collected and submitted to the Extension office <u>at tagging.</u>
 - Not sure what's required for your species for State Fair? Ask at tagging or consult this chart: <u>https://</u> <u>extension.purdue.edu/4-H/_docs/projects/animal-identification/animal-id-requirements.pdf</u>
- **Premise ID Requirement** Premise ID's indicate where an animal originates in case a disease needs to be traced back to it's source and are required by State Law. You can look up or apply for a new Premise ID by going to

https://www.in.gov/boah/. You only need one Premise ID for all the animals raised at the same address. <u>Bring this number</u> with you to tagging. Contact the office if you need help. If you have previously shown in 4-H the office has a record of your ID number.

- **Born & Bred** If your animal is Born and Bred, turn in the B&B form at tagging. Forms are available at the office or at tagging, see handbook for complete B&B rules.
 - Don't forget– New this year is a Sheep Born and Bred Class! Ask for form at tagging.
- Enroll your Animal on 4HOnline by <u>May 15th</u> All animals except rabbits, chickens, dogs & cats must be enrolled on 4HOnline. To enroll you will need:
 - Tag Numbers or Appropriate ID– given at ID Day
 - Premise ID Number– given by BOAH
 - Weight– if taken at ID Day
 - Birthdate– if applicable to species/ show class

The "New YQCA" Requirement

Indiana 4-H has chosen to replace the required Youth for Quality Care of Animals Training (YQCA) with a new training, Indiana 4-H Quality Livestock Care. **All 4-H members wishing to exhibit beef cattle**, **dairy cattle**, **swine**, **sheep**, **meat goats**, **dairy goats**, **poultry and rabbits must complete** *either* an in person <u>Indiana 4-H Quality</u> <u>Livestock Care</u> training or an online <u>YQCA</u> training. Indiana 4-H Quality Livestock Care will cost \$3 and online YQCA will cost \$12. Registration is now collected on 4-H Online Events.

2nd Training and 4-H Online Animal ID Help Night-<u>May</u> <u>15th</u>@ 6 pm in the Community Bldg. **3rd Training and FairEntry Deadline Help Night-** <u>June</u> <u>28th</u> @ 6 pm in the Community Bldg.

Countdown to the Southeastern Indiana 4-H Camp

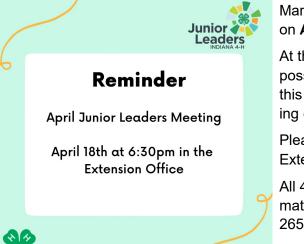

If you're ready to rock your summer you should get registered for the Southeastern **Indiana 4-H Camp June 5th-9th** at Camp Higher Ground in West Harrison, Indiana. This camp is for youth in grades **3-12** and is 4-H Member led. Our Junior Directors have chosen "Battle of The Bands" as our 2023 camp theme.

The camp aims to provide opportunities for leadership development, life skill development and a lot of fun. **Registration on 4-H Online Events is due by May 15th.** Camp costs \$220 dollars, thanks to generous donations the cost is discounted to \$110 for Jefferson County 4-H Members.

Contact the office with any questions at (812) 265 8919. We hope to see you on opening night!

Junior Leaders Meeting—April 18th at 6:30pm in the Extension Office

Mark your calendar! The April Junior Leaders Meeting will be on **April 18th at 6:30pm in the Extension Office**.

At the March Junior Leaders Meeting, the group discussed the possibility of going to Hickory Creek for a Bingo event. However, this event will need to be revisited at a later date due to scheduling conflicts.

Please take note of the location change! We will be at the Extension Office.

All 4-H youth in grades 7-12 are invited to attend! For more information, contact Jessica Martini at koons0@purdue or call (812) 265-8919.

4-H Youth Development					
State 4-H Trips @ Purdue- Register By May 15th					
State & National		State 4-H Trips are back! If you have never attended a State 4-H Trip such as 4-H Round-Up, 4-H Academy @ Purdue University, State 4-H Junior Leader Confer- ence or the like, this may be the year to attend! Expe- rience living in a college dorm, exploring career fields, talking with professors and specialists, and meeting 4- H members from across the state.			
4-H Opportunities 2022-2023		The Jefferson County 4-H Fair Board will sponsor Jefferson County 4-H Members to go on these trips. Registration is handled at the county level to facilitate this process.			
	CONFERENCE CONFERENCE CONFERENCE	View the dates and links to trip information websites below!			
		Ready to register? Contact the Extension Office by calling (812) 265-8919, stopping by or emailing one of the 4-H Educators. Jessica Martini, koons0@purdue.edu or Britt Copeland copelanb@purdue.edu

National Public Health Week—April 3rd-9th

On April 3rd-9th we celebrate National Public Health Week!

During each day of National Public Health Week, we focus on a particular public health topic. Then, we identify ways each of us can make a difference on that topic. These areas are critical to our future success in creating the healthiest nation, and everyone can do their part to help. On Friday, April 7th we celebrate Rural Health which impacts places like Jefferson County!

Fourteen percent of Americans <u>live</u> in rural areas. Rural Americans have <u>higher</u> <u>rates</u> of cigarette smoking, high blood pressure and diabetes. Compared to urban residents, they are at higher risk for poor health outcomes because of the <u>range</u> of health disparities they face. Racial/ethnic minorities and tribal groups are at higher risk for poor health outcomes, <u>compared</u> to non-Hispanic white adults. These health disparities include poverty, food deserts, also known as food apartheid, exposure to specific environmental

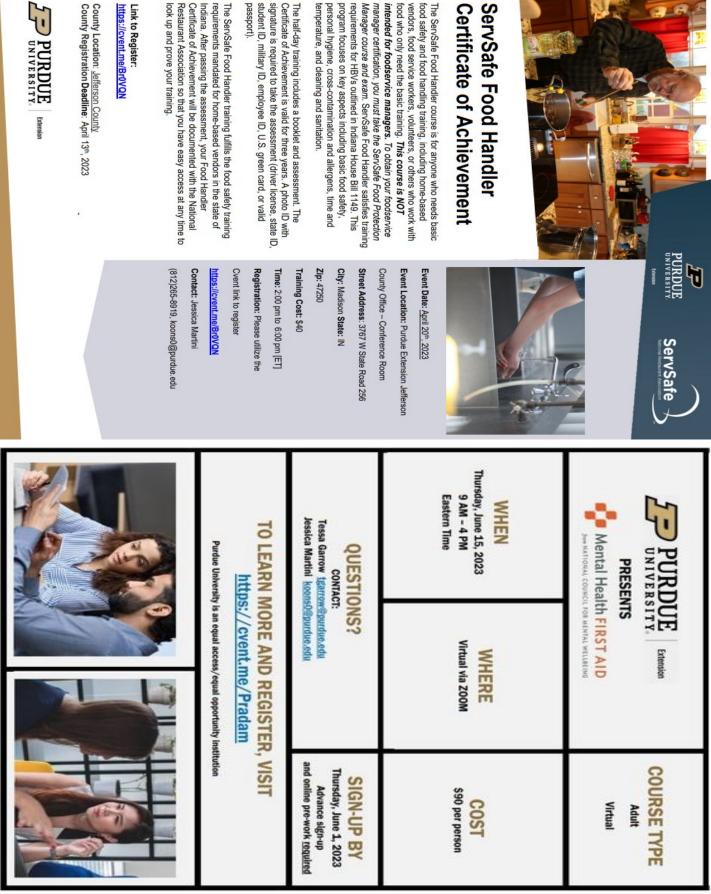

hazards and less time for leisurely physical activity. People living in rural areas have <u>less access</u> to health care because of fewer providers and facilities and more transportation barriers. They are also not as likely to have health insurance. These factors play a part in the <u>greater risk</u> of death from heart disease, cancer, stroke, chronic lower respiratory disease and unintentional injury from motor vehicle crashes and opioid overdoses that rural residents face.

There are <u>effective strategies</u> that have been tested in multiple studies and have worked in rural communities to help reduce these disparities. School breakfast programs help <u>reduce</u> food insecurity and improve student diet, health and academic achievements. Research also shows that <u>vocational training</u> for adults and high school students help <u>strengthen</u> the health workforce available in rural communities and set residents on a path to succeed in and improve their communities. <u>School-based health care</u> and dropout prevention programs also help high school students achieve academic success. Increased <u>access to naloxone</u> and training to administer it can also bring a decrease in fatal opioid overdose rates.
