Tick Prevention– Purdue Forestry & Natural Resources Got Nature Blog

Lenny Farlee, Sustaining Hardwood Extension Specialist, Forestry and Natural Resources, Purdue University

Spring brings an opportunity to spend more time outdoors but also increases our exposure to tick bites and infection from some of the diseases that ticks carry. Taking some precautions to reduce risks of exposure and infection from ticks can make your outdoor activities more safe and enjoyable. Ticks can be found in almost any location that has animals and vegetation, so completely avoiding ticks is very difficult. But there are some practices that will help you prevent ticks from biting and passing disease organisms to you.

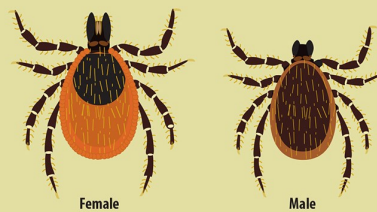

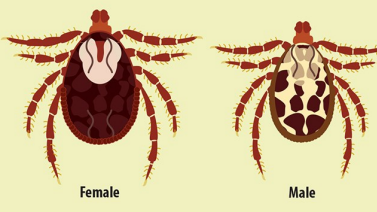

Here are several suggestions:

- Wear light-colored clothing that makes it easier to see ticks and remove them before they get to bare skin.
- Tuck in shirt-tails, tuck pants into boots or socks or use “tick gators” that are essentially a legging that covers where your pants and socks or boots meet.
- Wearing a hat is another good precautionary measure.
- Treat bare skin with repellants containing 20 to 30% DEET. Always read and follow label directions!
- Treat clothing (not skin!) with repellants containing permethrin prior to entering areas with ticks. Once dried on the clothing, permethrin can still be effective after several washes. Follow label directions.
- Upon your return, inspect clothing for any ticks. Tumbling clothes in a hot dryer for an hour will kill ticks. Shorter times may be effective if the clothes are not wet.
- Wash up after visiting tick-infested areas and do a body check for any ticks.

If you find a tick attached, remove it by using tweezers or a tick removal tool to grasp it as near to the skin as possible and pulling straight out. DO NOT use hot match heads or needles, nail polish, gasoline or similar techniques. Ticks that are removed shortly after they attach may not have the opportunity to pass disease organisms to you, so quick detection and removal are good prevention methods.

If you experience a rash, fever, chills, aching or other unusual symptoms after a tick bite or exposure to tick-infested areas, see your physician immediately. Most tick-borne diseases can be effectively treated with early detection. Enjoy the outdoors by taking precautions to reduce your risks. Purdue has an informational webpage on ticks at [Purdue Medical Entomology](#).

4-H Club Leader Updates

Barrel Painting Contest

The 2025 Barrel Painting Contest theme is “Beyond Ready!”

For our youth the road ahead may be challenging, yet 4-H'ers are succeeding. Data shows that compared to their peers 4-H members are 2x more likely to have a goal of being a leader, 3x more likely to participate in community service, and 2x more likely to report living life with intentionality and purpose. For this year's barrel painting contest answer the question: how is 4-H making youth “Beyond Ready” for their future. We encourage you to drive back behind the maintenance barn and pick up a trash barrel that needs some love and give it a fresh coat of paint! Make sure your masterpiece has the Club Name, Year and Theme painted on it. Drop completed Barrels in the Exhibit Hall Breezeway anytime before project check in day to be judged at project check in.

4-H Club Photos for the Fair Preview in the Paper

Email your club photos to the office as close to June 1st as you can to be included in the fair preview. Please include a list of members who are pictured. If you have any club accomplishments that might make a nice special interest story for the Fair Preview let us know!

Remind your Seniors to Turn in Photos and Bios to the Office so we can recognize them at Fair!

Photos and bios can be emailed to the office or use the upload link in the following page.

If you have not returned your club financial audits please do so asap.
