Roughage

Answers can be found in the OSU Beef Resource Handbook – 4-H 117R.

Purdue University is an equal access/equal opportunity institution.  
This material may be available in alternative formats.

1. Electric shocks are always a risk when working in wet or damp areas. You should use a \_\_\_\_\_ interrupter with water heaters, power tools, and other electric equipment.
2. When a calf is born, it should nurse within the first few hours because it must receive the \_\_\_\_\_ from the cow.
3. Knot users consider the \_\_\_\_\_ knot one of the most useful knots. It is a nonslip knot, as such it can be used to form a loop that will not tighten or draw down.
4. Beef, swine, and dairy cattle are partially \_\_\_\_\_ and have poor depth perception.
5. The key to safely handling animals is being aware of and respecting animals comfort or \_\_\_\_\_.
6. After a calf is born, dip the calf's naval in \_\_\_\_\_ to protect the animal from infection.
7. Face flies may also spread the infection called \_\_\_\_\_.
8. There are two types of flies that are major pests to cattle: the \_\_\_\_\_ fly and the \_\_\_\_\_ fly.
9. Handlers should also be concerned with zoonotic diseases, which are illnesses that can be transmitted between humans and animals. Five of these include:  
 \_\_\_\_\_ Leptospirosis \_\_\_\_\_  
 Rabies \_\_\_\_\_
10. An easy way to remember how to tie a bowline know is with a story that Involves a \_\_\_\_\_, tree and a hole.
