UPCOMING EVENTS

Seed Treatment Workshop
 Nutrient Management Plan Workshop
 7/14 - 7/20 Noble County Community Fair

8/22 NEPAC Field Day

11/1 - 11/2 Rooted & Resilient: Homesteading Conference

11/19 Commercial Applicator Conference

9/3 Master Gardener class begins

Seed Libraries and Seed Exchanges

The Office of the Indiana State Chemist (OISC) regulates seed in the state. Non-commercial seed sharing occurs when seed is given with no monetary consideration.

Each entity distributing seeds in this manner must have a permit. There is no fee and the permit is renewed annually. Seeds must have a printed label with species name, statement indicating if the seed has been treated (if treated, label in accordance with applicable laws), reference identification for traceability, address of the non-commercial seed sharing entity, and the calendar month and year the seed was donated if no germination test date is available.

Seed must be free of foreign material, including mulch, fertilizer, mats, tapes, or other planting devices and must contain fewer than 8 ounces of agricultural seed or 4 ounces of vegetable or flower seed. Germination and purity analysis is not required.

A sign must be posted at each non-commercial seed sharing location stating the seeds distributed may not meet germination or varietal purity standards prescribed by state seed law. The sign must also state that patented seed or varieties protected by the Plant Variety Protection Act will not be accepted or distributed without permission of the certificate holder. The sign and permit application can be found on the OISC website.

For a detailed list of regulations and related resources:

Wet Spring Weather Causing Slug Issues

Slug damage recently caused replanting of fields areas in northeast Indiana. Damage has also been seen in ornamentals and gardens. Slugs feed on decaying organic matter and plant foliage. Their activity is favored by plant residue on the soil surface (such as no-till fields) and the moist conditions prevalent earlier this season.

Slugs are soft-bodied, legless, and slimy gastropods (not insects). Slug populations are greatest in reduced or no-till systems or with cover crops where high surface residues favor their development.

Graphics from Pest & Crop Newsletter: https://ag.purdue.edu/department/entm/extension/field-crops-ipm/docs/slugs_corn.pdf

Slugs usually feed on the lower leaves of plants, leaving narrow, irregular tracks. Severe feeding results in tattered leaves resembling hail damage. Silver-colored slime trails are a key sign of slugs. Normally for corn, damage is severe only on emerging to four-leaf stage. Stand losses may occur when fields are too wet for seed slots to properly close during planting operations and remain open during early plant growth.

No-till/reduced-till, cover crops, and weedy fields should be closely watched. Carefully inspect under residues and soil clods for the presence of slugs and look for their slime trails.

NEPAC Field Day

- Update on Field Crop Weeds
- Cover Crop Termination
- New Technology for Weed Control
- Digital Ag and Scouting
- Weather & Market Outlook
- PARP, CCH, and CCA credits

Register by August 1 to ensure your lunch and to receive a First Aid Kit.

No cost to register thanks to sponsors!

Register at tinyurl.com/NEPAC2024

PURDUE EXTENSION - ALLEN COUNTY JULY 9 • 9AM TO 2PM

WORKSHOP

plans. Our educators will walk through nutrient basic nutrient management plan. We will finish the day by writing a practice plan or assisting cycles, how to take a manure sample, how to read a manure analysis, and how to write a you in writing your plan if you have all the Learn the basics of nutrient management needed information available.

Indiana Commercial Applicator Cat. 14 credits (2) and Certified Crop Advisor Credits Registration is \$20; includes materials & lunch.

REGISTER BY JULY 3

Weather Preparedness: Tornadoes

Tornadoes have rotating winds which can reach speeds of 300 mph. They range from narrow to over a mile wide and their paths can last seconds or continue as much as 50 miles. Sometimes there is advanced warning, but tornadoes can develop rapidly. Therefore, we may see weather warnings indicating atmospheric conditions are suitable for tornado formation.

To prepare:

- · be alert to weather conditions and listen or watch weather broadcasts
- look for approaching storms
- Danger signs include greenish skies, hail, low-lying dark clouds, and the loud sound often described like a train
- · be ready to take shelter

Residence, building, or other structure: Go to basement, cellar or lowest building level; if no basement, go to interior room closet away from windows

Vehicle or mobile home: Get out immediately and seek sturdy shelter

Outside without shelter: Lie flat in ditch and cover head; do not get under overpasses or bridges

Did you know?

Airborne debris causes most fatalities and injuries in tornadoes.

Manure Staging

by Natalee Hochstetler, Purdue Extension - Noble County Intern

Have you ever thought of the safety precautions in using and handling manure? If we don't understand why it is important to be careful when handling manure, we may find ourselves in a situation where run-off or pollution may occur. Not following restrictions could cause pollution issues as well as legal repercussions.

One area to consider is manure storage or staging. Most of the time a temporary pile of manure is used right away. However, if it is stored for any length of time, it is important to understand the restrictions of where and how you can stage your manure.

You cannot stage manure

- within 300 feet of drainage inlets, water wells, or surface water.
- near water unless covered with a gradient barrier where it directs manure away from any water, floodway, or waterways.
- near slopes greater than 6% unless you have a way to control potential runoff and run-on.

Restrictions for staging manure that will not be used within 72hrs. of staging include:

- · Cover with a gradient barrier
- Make sure it is within 100 feet of property lines and public roads
- Stage 400 feet away from residential buildings

Remember, if you get your manure from CFOs you are required to have a certification to do so. If you have any further questions about manure staging regulations contact the Office of the Indiana State Chemist

LEAVE FAWNS BE

HELP SLOW THE SPREAD OF CWD

In April 2024, DNR detected Indiana's first positive case of chronic wasting disease (CWD) in LaGrange County.

CWD is a fatal infectious disease that affects the nervous system of white-tailed deer. It is contagious between deer through direct contact, contaminated environments, and bodily fluids.

Fawns can carry CWD and won't appear sick, so leaving them alone helps prevent CWD from moving to new areas.

LEARN MORE ABOUT CHRONIC WASTING DISEASE

LEARN MORE ABOUT ORPHANED & INJURED WILDLIFE

Healthy fawns are often left by themselves for hours in a safe place while the mother looks for food. The mother is usually nearby, but out of sight, to keep an eye on her fawn while eating.

- Don't move fawns found in LaGrange, Steuben, DeKalb or Noble counties to a rehabilitator outside this 4-county area.
- Confirm that a fawn is truly injured or orphaned before acting.
- Learn more about fawn behavior and CWD using the QR codes below.

Important Pesticide Updates

Legislative changes regarding the use of pesticides in Indiana go in effect July 1, but OISC will implement the less stringent measures immediately.

The main changes are:

- Commercial applicators of non-restricted-use pesticides can become Registered Technicians by watching a video, passing the core exam, or attending in-person training.
- Restricted Use Pesticides can be applied by non-certified individuals if the federal direct supervision rules are followed (see the full document for the complete list of actions required).
- Bulk containment rules are less restrictive (containers of ag pesticides of 500 or greater as opposed to 55 gallons).

Questions regarding certification requirements may be addressed to Leo Reed, Certification Manager, OISC (765-494-1588, reedla@purdue.edu).

Bulk Storage of Pesticides and Fertilizer questions can be directed to the Fertilizer Section of OISC at fertregistration@groups.purdue.edu.

For more information: https://oisc.purdue.edu/pesticide/index.html

Clean Sweep Pesticide Disposal Program

August 14, 2024 9:00 a.m. - 2:00 p.m.

NISWMD - Steuben Co. 2320 W 800 S, Ashley

OISC Clean Sweep Pesticide Disposal Program is designed to collect and dispose of suspended, canceled, banned, unusable, opened, unopened, or unwanted <u>pesticides</u> (herbicides, insecticides, rodenticides, fungicides, miticides, etc.). This is NOT for non-pesticidal chemicals, paints, or other materials.

The event is sponsored by the Office of Indiana State Chemist (OISC) and is free of charge up to 250 pounds per participant (over 250 pounds costs \$3/pound).

Complete the Clean Sweep Pesticide Disposal Participant Form (https://oisc.purdue.edu/pesticide/2024cleansweep/2024_clean_sweep_fo rm.pdf) to the best of your ability. Mail or e-mail the completed form to Nathan Davis at 765-494-4331 or cleansweep@groups.purdue.edu no later than Fri. August 9, 2024.

For more information go to: oisc.purdue.edu/pesticide/clean_sweep.html

The Noble County Master Gardener Symposium was held in March at the CLC during NoblePalooza. We had great speakers and many educational resources.

The Master Gardeners are CLC Farmer's Market vendors on Saturdays from 9 a.m. to noon. Sales support the scholarship fund and community programs. They have plants for sale and are always ready to answer questions.

This year the Master Gardener Scholarships went to recent graduate Paige Hopf of Central Noble and 2nd year recipient Cy Wolheter. Congratulations!

In April, Purdue Extension hosted a Rainscaping Educational Program at the Noble County Public Library in Albion. Participants installed a Rain Garden at the library. Stop by and check out the garden at the back of the library!

West Noble Middle School and Tina Anderson hosted an after-school gardening club. Several youth became official Junior Master Gardeners!

MGs met at Promise Keeper Farm in Noble County
