Across

3. A foal's bones are soft, and the joints are still growing, and sometimes they can be affected by early _____ trimming.
4. Shoeing should always be done by a _____ who is experienced in the art. It takes training and a lot of practice to become good at this job.
6. Important points in the care of a horse's feet include keeping them _____, preventing them from drying out, and trimming them so they retain their proper shape and length.
8. _____ is the most common hoof disease. It is caused by a lack of cleanliness and is characterized by a pungent, foul odor and a blackish discharge from the area around the frog.

Down

1. Use a _____ to clean the foot out, working from the heel of the foot toward the toe.
2. The end of the heels of the shoe should extend to the end of the horse's heel and should be slightly wider than the heel of the foot to allow for _____ of the hoof wall when the horse steps down.
5. The _____ helps absorb shock and concussion as the horse moves.
7. The hooves should be trimmed regularly, about every _____ weeks, whether the horse has shoes or not.
